## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8, 16 and 17, drawn to a method of obtaining transformable callus tissue comprising germinating a mature seed in tissue culture media, classified in class 800, subclass 278, for example.
  - II. Claims 9-14, drawn to a method of obtaining transformable callus tissue comprising germinating a zygotic embryo in tissue culture, classified in class 435, subclass 430.1, for example.
  - III. Claim 15, drawn to a method of transforming monocotyledonous plants comprising germinating a zygotic embryo from a monocotyledonous plant in tissue culture and isolating a nodal section, classified in class 800, subclass 278, for example.
- 2. The inventions are distinct, each from the other because of the following reasons:
  Inventions I-II and III are patentably distinct. These inventions are different
  because each invention uses different starting material and different steps.

  Furthermore, searching the invention of groups I-II together with the invention of groups
  III would impose a serious search burden. In the instant case, prior art searches of
  methods of obtaining transformable callus tissue comprising germinating a mature seed
  or zygotic embryo in tissue culture are not coextensive with prior art searches of a
  method of transforming monocotyledonous plants. Search of each of these inventions

Art Unit: 1638

would require different key word searches of each group using divergent patent and non-patent literature databases. The different searches would then require subsequent in-depth analysis of the unrelated prior art literature, placing a serious burden on the Office in terms of both search and examination. As such, it would be burdensome to perform examination of inventions I-II and III together.

- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- Applicant is advised that the reply to this requirement to be complete within one month (not less than 30 days) must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Keith O. Robinson, Ph.D. whose telephone number is 571-272-2918. The examiner can normally be reached on Monday Friday 7:30 am 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anne Marie Grunberg can be reached on 571-272-0975. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 1638

5. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
